

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Modern Mathematical Texts

Edited by CHAS. S. SLICHTER

New Edition

Ready in November

Slichter—Elementary Mathematical Analysis

By CHARLES S. SLICHTER, Professor of Applied Mathematics, University of Wisconsin. About 490 pages, $5 \times 7\frac{1}{2}$, Illustrated. Now in press.

An entirely revised edition of this distinctive first-year text will soon be ready. In the light of the experience gained by the extensive class-room use of the book, Professor Slichter has simplified much of the material, has omitted some work, and has added numerous worked exercises. New sets of exercises and long lists of miscellaneous and review exercises have been inserted. Several changes in order of material and in method of treatment have also been made. The book treats the various topics in analysis as belonging to a single science and hence combines work in trigonometry, college algebra, and analytic geometry.

Other Books in the Series

Dowling—Projective Geometry

By L. W. DOWLING, Ph.D., Associate Professor of Mathematics, University of Wisconsin. 215 pages, $5 \times 7\frac{1}{2}$, illustrated, \$2.00.

"Dowling's *Projective Geometry* pleases me by its direct and rapid style, and by its large content in small space. Through brevity the author attains unexpected fullness. The set of problems are very satisfactory, some relating projective to metric theorems, others developing or extending the discussions, purely projective, of the text. Diagrams are unusually well designed and well executed, e. g., those for the two Desargues theorems."—*Professor Henry S. White, Vassar College.*

March & Wolff—Calculus

By HERMAN W. MARCH, Ph.D., and HENRY C. WOLFF, Ph.D., Assistant Professors of Mathematics, University of Wisconsin. 360 pages, $5 \times 7\frac{1}{2}$, illustrated, \$2.00.

Wolff—Mathematics for Agricultural Students

By HENRY C. WOLFF, Assistant Professor of Mathematics, University of Wisconsin. 311 pages, $5 \times 7\frac{1}{2}$, illustrated, \$1.50.

Unified Mathematics

By LOUIS C. KARPINSKI

University of Michigan

HARRY Y. BENEDICT and JOHN W. CALHOUN

University of Texas

UNIFIED—The authors have achieved their aim so well that the work possesses an organic unity through which each of the traditional subjects contributes its resources to the understanding of the others and does this at the appropriate time and place.

PRACTICAL—The statistical problems contain many relating to agriculture, and there are engineering problems of a simple type. The problems dealing with projectiles not only give valuable drill in the use of formulas and in trigonometric relations, but they also supply correct information concerning the nature of modern artillery. Certain problems of particular interest are treated at various times from different points of view. The applications include much work on the interest function and on annuities. When theoretical mathematics is presented, the problems and applications are designed to show the use that is made of it in the world of affairs.

TEACHABLE—Written by three men who have had long experience with Freshman classes in different parts of the United States, it is sufficiently simple to be intelligible to the average Freshman and sufficiently practical to arouse his interest.

At the outset of the work great stress is laid upon arithmetical computation; how this can be facilitated by the application of the formulas of elementary Algebra is shown in a separate chapter, and such computation is constantly insisted upon in the list of problems. The fact that numbers, as they appear in scientific work, are in general measurements with very definite limits of accuracy is made clear, and the proper treatment of such numbers in computation is explained. Several hundred diagrams on co-ordinate paper with decimal subdivisions as used by engineers, army and navy officers, and statisticians, serve to make clear the use of graphical methods and to develop the ability to make proper use of this instrument.

Logarithms are introduced at a very early point and their employment in the problems continues through the work. The fundamental ideas of the trigonometric relations are made a vital and consistent part of the work. Even for those institutions which require trigonometry for entrance, this text is usable, as it gives the drill in the application of trigonometric functions to practical problems which is so necessary for students of science.

Cloth. 528 pages. Price, \$2.80

SYRACUSE, NEW YORK

Publications of the American Mathematical Society

TRANSACTIONS OF THE AMERICAN MATHEMATICAL SOCIETY.

The Transactions is devoted to research in pure and applied mathematics and is the official organ of the Society for the publication of important original papers. Published quarterly. Subscription price for the annual volume, \$5.00.

BULLETIN OF THE AMERICAN MATHEMATICAL SOCIETY. De-

voted largely to critical reviews of mathematical books, the Bulletin also contains reports of the meetings of the Society and of other mathematical bodies, short original papers, reports on progress in the science, lists of new publications, and notes on current events in the mathematical world. Published monthly, except August and September. Subscription price for the annual volume, \$5.00.

THE EVANSTON COLLOQUIUM LECTURES. Delivered at the Chicago Congress of Mathematics, 1893, by FELIX KLEIN. Republished by the Society, 1911. Price, 75 cents.

THE BOSTON COLLOQUIUM LECTURES. Delivered before the Society, Boston, 1903, by H. S. WHITE, F. S. WOODS, and E. B. VAN VLECK. Price, \$2.00.

THE NEW HAVEN MATHEMATICAL COLLOQUIUM. 1906. By E. H. MOORE, E. J. WILCZYNSKI, and MAX MASON. \$3.00.

THE PRINCETON COLLOQUIUM LECTURES. 1909. By G. A. BLISS and EDWARD KASNER. \$1.50.

THE MADISON COLLOQUIUM LECTURES. 1913. By L. E. DICKSON and W. F. OSGOOD. \$2.00.

American Mathematical Society

501 West 116th Street

New York City

The American Mathematical Society was organized in 1894 and includes among its 730 members nearly all the mathematicians of the United States. The annual dues are \$5.00; admission fee, \$5.00. Members receive the Bulletin without further charge, and are entitled to a reduced price on the other publications of the Society. Meetings are held ten times a year in New York, Chicago, and other cities. The Society has a library of over 5000 volumes.

SCHOOL AND SOCIETY

A weekly journal, which began publication on January 2, 1915, covering the field of education in relation to the problems of American democracy. Its objects are the advancement of education as a science and the adjustment of our lower and higher schools to the needs of modern life. Each number ordinarily contains articles and addresses of some length, shorter contributions, discussion and correspondence, reviews and abstracts, reports and quotations, proceedings of societies and a department of educational notes and news.

Annual Subscription \$3.00; single copies 10 cents

SCIENCE

A weekly journal, established in 1883, devoted to the advancement of the natural and exact sciences, the official organ of the American Association for the Advancement of Science. For twenty years SCIENCE has been generally regarded as the professional journal of American men of science.

Annual Subscription \$5.00; single copies, 15 cents

THE SCIENTIFIC MONTHLY

An illustrated magazine, devoted to the diffusion of science, publishing articles by leading authorities in all departments of pure and applied science, including the applications of science to education and society. Conducted on the editorial lines followed by *The Popular Science Monthly* since 1900.

Annual Subscription \$3.00; single copies, 30 cents

THE AMERICAN NATURALIST

A monthly journal, established in 1867, devoted to the biological sciences with special reference to the factors of organic evolution.

Annual Subscription \$4.00; single copies, 40 cents

AMERICAN MEN OF SCIENCE

A biographical directory, containing the records of about 5,500 scientific men. Price, \$5.00 net

SCIENCE AND EDUCATION

A series of volumes for the promotion of scientific research and educational progress.

Volume I. The Foundations of Science

By H. POINCARÉ. Containing the authorized English translation by George Bruce Halsted of "Science and Hypothesis," "The Value of Science," and "Science and Method."

Price, \$3.00 net

Volume II. Medical Research and Education

By RICHARD MILLS PEARCE, WILLIAM H. WELCH, C. S. MINOT and other authors.

Price, \$3.00 net

Volume III. University Control

By J. McKEEN CATTELL and other authors.

Price, \$3.00 net

The American Mathematical Monthly

OFFICIAL ORGAN OF

The Mathematical Association of America

Is the Only Journal of Collegiate Grade in
The Mathematical Field in this Country

This means that its mathematical contributions can be read and understood by those who have not specialized in mathematics beyond the Calculus.

The Historical Papers, which are numerous and of high grade, are based upon original research.

The Questions and Discussions, which are timely and interesting, cover a wide variety of topics.

The Book Reviews embrace the entire field of collegiate and secondary mathematics.

The Curriculum Content in the collegiate field is carefully considered. Good papers in this line have appeared and are now in type awaiting their turn.

The Notes and News cover a wide range of interest and information both in this country and in foreign countries.

The Problems and Solutions hold the attention and activity of a large number of persons who are lovers of mathematics for its own sake.

There are other journals suited to the Secondary field, and there are still others of technical scientific character in the University field: but the MONTHLY is the only journal of Collegiate grade in America suited to the needs of the non-specialist in mathematics.

THE MATHEMATICAL ASSOCIATION OF AMERICA now has over eleven hundred individual members and over seventy-five institutional members. There are already nine sections formed, representing twelve different states. The Association has held so far two national meetings per year, one in September and one in December. The sections, for the most part, hold two meetings each year. All meetings, both national and sectional, are reported in the Official Journal, and many of the papers presented at these meetings are published in full.

The slogan of the Association is to include in its membership every teacher of collegiate mathematics in America and to make such membership worth while. Application blanks for membership may be obtained from the Secretary at Oberlin, Ohio.

THE NEW ERA PRINTING COMPANY

LANCASTER, PA.

Is prepared to execute in first-class and satisfactory manner all kinds of printing and electrotyping. Particular attention given to the work of Schools, Colleges, Universities, and Public Institutions.

Books, Periodicals

Technical and Scientific Publications

Monographs, Theses, Catalogues

Announcements, Reports, etc.

All Kinds of Commercial Work

(Printers of the Bulletin and Transactions of the American Mathematical Society, etc., etc.)

Publishers will find our product ranking with the best in workmanship and material, at satisfactory prices. Our imprint may be found on a number of high-class Technical and Scientific Books and Periodicals. Correspondence solicited. Estimates furnished.
